

## WEBWORKS SYSTEM REQUIREMENTS

HomeSchoolWorks has incorporated *Illuminate Live!* as its world-class, real-time education, demonstration and collaboration program that is customizable and easy to use.

*Illuminate Live!* enables live, online learning, coaching, mentoring and meeting; and features full two-way audio, direct text messaging and a shared, interactive whiteboard—all in one intuitive, graphical interface.

### Minimum System Requirements for Windows

- Processor Pentium II 266 MHz processor or faster
- Operating System Windows 95/98/NT/ME/2000/XP
- Memory 64 MB RAM for 95/98/ME; 128 MB RAM for NT/2000/XP
- Storage Space 20 MB of available disk space on your hard drive
- Audio Soundcard with speakers and headset (Usually a 'built-in' or 'free-standing' mic **will not work well.**) A *Logitech* medium priced headset seems to work best.
- Connection 28.8 kbps or higher Internet connection. Expect audio capabilities only, at low bandwidth.

### Cross Platform

- Completely cross platform. Whether you have a Windows PC, Mac, Solaris, or Linux workstation, you get the same superior user experience every time.

### User friendly for dial-up users

- Optimized for low bandwidth. Our all-bandwidth connectivity means that you interact with no lag time or garbled communication, regardless of Internet connection speed, even at 28.8.kbps. We will do a test prior to class to guarantee a good connection.
